

WebStudy COURSE MANAGEMENT SYSTEM™

With WEBSTUDY 'Learning' CMS, instructors will create an online course faster, using flexible multi-media tools.

WEBSTUDY is a MiCTA Approved CMS

General Features

The WEBSTUDY 'Learning' CMS is: a) easy to use for students, faculty and administrators, b) reliable, c) integrates with third party tools, d) extendable, scalable without interruption, e) on demand measurable usage reporting, f) accessible, g) administratively practical, h) MAC/ P/C cross browser compatible, i) adheres to standards, j) intuitive, k) exceptional use of multimedia and l) provides a secure single login.

From a general features standpoint what makes *WEBSTUDY 'Learning' CMS a better choice* is that the original architecture was conceived by a professor and a student dedicated to creating an online learning-centered pedagogy

Assessments

The WEBSTUDY 'Learning' CMS a) is compatible with Respondus TestGEN, Exam View and any QTI standard test generation product, b) provides instructors with automated capabilities such as time limits, randomization of test questions, a robust MathML compatible equation editor usable in both questions AND answers, and best or last attempt prevails. WEBSTUDY assessments support drag and drop graphics and CourseLive audio/video in questions and answer sets. Combine these with secure exam administration allowing instructors to create, organize and copy their assessments from course to course in WEBSTUDY®.

MyWebStudyTutor™ makes *WEBSTUDY 'Learning' CMS a better choice*. Instructors can use rules and relations to present online coursework much like a tutor varying the content to each student based on their understanding of the course content.

WebStudy®
Learning Virtually Anywhere

Discussion Forum

The WEBSTUDY 'Learning' CMS "Forums" give students the tools they need to exchange ideas, reflect on alternate perspectives, view group entries and gain feedback on their participation in the discussion.

WEBSTUDY 'Learning' CMS is a better choice because instructors and students are able to go beyond simple text discussion and use audio/video exchanges – great for language courses!

Grading / Student Performance

The WEBSTUDY 'Learning' CMS provides flexible grading schema and exportable electronic record keeping of all gradable entities. Where appropriate, grade calculation may be automated, tabulated and posted for student viewing in the "Grades" tab. The ability to work with rules, relations and outcomes regarding a student's performance is unprecedented, giving 'at risk students' the opportunity succeed where they may fail in a traditional CMS.

WEBSTUDY 'Learning' CMS is a better choice because, if a student does not meet the grade, then he/she will see the course content alter to meet their unique needs.

Communications / Group Collaboration

The WEBSTUDY 'Learning' CMS uses tools that allow students and faculty to truly engage with each other. They can send/receive email to/from individuals, the entire class, multiple classes or collaborative groups with a single click. Mail supports audio/video annotation adding a new personalized dimension to email. Instructors can assign students to cohorts or teams in which discussion forums and team chat areas with whiteboard are automatically created when the team is established.

WEBSTUDY 'Learning' CMS is a better choice because, individuals and groups are empowered with many interactive tools to capture comments, foreign language conversations, speeches, visual demonstrations, streaming video, etc.

Usability

The "notebook" metaphor offers navigation that is intuitive and easy to use. – allowing students to focus on learning, not technology. This is one of WebStudy's key differentiators and the reason we have wildly satisfied customers for 10+ years and the basis for new customers choosing WEBSTUDY over our competition.

The delivery of the course occurs in a "Timeline" within a virtual notebook, instead of folders. Materials are organized into "sessions". Timeline sessions are logical units corresponding to weeks, lectures, chapters in a text book, or any other logical pedagogical separation. These common familiar modular elements are packaged simply, creating a powerful virtual environment for learning.

WEBSTUDY demonstrates innovation and creativity - improving the instructor/student virtual relationship. Additionally, instructors and administrators are more suitably equipped to create new academic programs.
